PROFILE SUMMARY

Data Engineer with **4+ years of experience** designing and supporting cloud-based data pipelines, ETL workflows, and analytics solutions across banking, retail, and enterprise environments. Experienced in **AWS and Azure** data engineering with strong hands-on skills in **PySpark, SQL, ETL, Airflow, Databricks, and Snowflake**. Proven ability to build scalable data pipelines, optimize data processing, manage workflow orchestration, and deliver reliable datasets for reporting, analytics, and business decision-making.

TECHNICAL SKILLS

- **Programming** - Python, SQL
 - **Data & Analytics** - ETL, Data Cleaning, Feature Engineering, Statistical Modeling, EDA
 - **Cloud & Systems** - Cloud-Native Architectures, REST APIs, Distributed Systems
 - **Tools** - Git, Linux, Power BI, Excel
 - **Cloud Platforms:** AWS, Azure
 - **Data Engineering:** ETL, ELT, Data Pipelines, Data Ingestion, Data Transformation, Data Modeling, Workflow Orchestration
 - **Tools & Platforms:** Airflow, Databricks, Snowflake
 - **Core Areas:** Data Analysis, Pipeline Management, Batch Processing, Performance Optimization, Reporting Support
-

PROFESSIONAL EXPERIENCE

Walmart

Data Engineer

DEC 2024 – Present | USA

- Design and maintain AWS-based data pipelines to support scalable data ingestion, transformation, and reporting workflows.
- Build ETL processes using **PySpark** and **SQL** to process structured and semi-structured data for downstream analytics.
- Optimize data workflows for performance, reliability, and data quality across large-scale enterprise datasets.
- Support data modeling and integration activities to improve accessibility of business-critical data.
- Collaborate with cross-functional teams including analysts, engineers, and business stakeholders to deliver data solutions aligned with operational needs.
- Work with cloud-based data platforms and orchestration frameworks to automate and monitor recurring data jobs.

Tech: AWS, PySpark, SQL, ETL, Airflow, Databricks, Snowflake

Truist

Information Engineer Intern

MAR 2023 – NOV 2023 | USA

- Supported enterprise data engineering initiatives with a focus on **AWS-based ETL development**, pipeline monitoring, and data analysis.

- Built and enhanced ETL pipelines to move and transform data from source systems into analytics-ready datasets.
- Assisted in pipeline management activities including job scheduling, dependency handling, validation, and issue resolution.
- Used **SQL** and data analysis techniques to validate transformed datasets and improve reporting accuracy.
- Worked closely with business and technical teams to understand data requirements and support data-driven decision-making.
- Contributed to workflow optimization and documentation for improved maintainability and operational efficiency.

Tech: AWS, SQL, ETL, PySpark, Airflow, Data Analysis

Infosys

Software Engineer

JAN 2021 – Dec 2022 | Bengaluru, India

- Worked on data engineering assignments involving cloud-based ETL workflows and data integration across **AWS and Azure** environments.
- Developed and supported data pipelines for ingesting, transforming, and loading data into business reporting systems.
- Used **SQL** and **PySpark** for data processing, cleansing, and transformation tasks.
- Assisted in building scalable and reusable ETL components to improve data delivery efficiency.
- Supported data validation, troubleshooting, and optimization of batch data workflows.
- Collaborated with project teams to deliver reliable datasets for analytics and operational reporting.

Tech: AWS, Azure, PySpark, SQL, ETL, Databricks

EDUCATION

University of Texas at Arlington

Master's, computer science

Jan 2023 - Dec 2024
